

TENSOR STRENGTH

TENSOR STRENGTH DUP

4-WEEK DAILY UNDULATING STRENGTH PROGRAM

THE STANDARD

STRENGTH. SKILL. SPEED. REPEAT.

Progressive training. Clear standards. Measurable execution.

FORMAT

3-DAY ROTATION

EMPHASIS

MAXIMUM STRENGTH

STANDARD

RPE + PERCENTAGES

PROGRAM BRIEF

A 4-week daily undulating strength block built around heavy, volume and speed exposures.

WHO THIS IS FOR

Intermediate lifters who already perform the squat, bench press and deadlift safely and want a three-day strength structure with distinct daily stimuli.

SCHEDULE

- Train 3 non-consecutive days per week when possible: Day A / Day B / Day C.
- Repeat the weekly sequence for four weeks.
- Use a current training max (TM), not an old lifetime PR. A practical TM is about 90-95% of a true recent max.

PROGRESSION STANDARD

If bar speed and technique remain strong, follow the listed percentages. If readiness is poor, reduce the day by 2.5-5%. Never force the prescribed load through obvious technical breakdown.

RPE REFERENCE

RPE	Approx. reps in reserve	Use
6	~4 RIR	Technique / introductory loading
7	~3 RIR	Productive, repeatable work
8	~2 RIR	Hard working sets
9	~1 RIR	Very hard; clean rep still available
10	0 RIR	Max effort / technical failure; use selectively

4-WEEK LOADING MAP

Main-lift percentages are based on your current training max.

Week	Heavy Day A	Volume Day B	Speed / Technique Day C	Intent
1	80% main lifts	67.5-70%	60-65%	Establish clean baseline
2	82.5%	70-72.5%	62.5-67.5%	Add controlled load
3	85%	72.5-75%	65-70%	Highest productive stress
4	85-87.5%, lower volume	65-72.5%, lower volume	60-65%	Realize strength; reduce fatigue

LOAD ADJUSTMENT RULES

- Upper body: when using non-percentage accessory loading, add 2.5-5 lb once the top of the rep range is completed at target RPE.
- Lower body: add 5-10 lb under the same conditions.
- If the final rep becomes a grinder before the target RPE, hold or reduce the load.
- Rest 3-5 minutes on heavy compounds, 2-3 minutes on volume compounds, and 60-120 seconds on accessories.

WEEK 4

Week 4 is not a max-out week. Keep reps clean, reduce accessory volume by roughly 25%, and finish the block feeling capable of testing or beginning another cycle.

DAY A - HEAVY TRIPLES

Strength exposure: high tension, low repetition, full recovery.

Exercise	Week 1	Week 2	Week 3	Week 4	Rest
Back Squat	4x3 @ 80%	4x3 @ 82.5%	5x3 @ 85%	3x3 @ 85-87.5%	3-5m
Bench Press	4x3 @ 80%	4x3 @ 82.5%	5x3 @ 85%	3x3 @ 85-87.5%	3-5m
Deadlift	3x3 @ 77.5%	3x3 @ 80%	4x3 @ 82.5%	2x3 @ 82.5-85%	3-5m
Bulgarian Split Squat	3x8 @ RPE 7	3x7 @ RPE 8	3x6 @ RPE 8-9	2x6 @ RPE 7	90s
Chest-Supported Row	3x8 @ RPE 7	3x8 @ RPE 8	4x6-8 @ RPE 8	2x8 @ RPE 7	90s
DB Incline Press	3x8 @ RPE 7	3x8 heavier	3x6-8 @ RPE 8	2x8 @ RPE 7	90s
Hamstring Curl	3x10	3x10 heavier	3x8-10 hard	2x10 easy	60-90s
Pallof Press	3x10/side	3x12/side	3x12/side	2x10/side	60s

POWER + FINISHER

- Broad jump: 3x3 before the first heavy lift. Stop if distance or landing quality drops.
- Farmer carry: 3x30-40 m heavy after assistance work. Keep posture tall and steps controlled.

DAY B - VOLUME

Build muscle and technical capacity without turning every set into a grind.

Exercise	Week 1	Week 2	Week 3	Week 4	Rest
Front Squat	4x6 @ 67.5%	4x6 @ 70%	5x5 @ 72.5%	3x6 @ 65-67.5%	2-3m
Bench Press	4x6 @ 70%	4x6 @ 72.5%	5x5 @ 75%	3x6 @ 67.5-70%	2-3m
Romanian Deadlift	3x8 @ RPE 7	3x8 @ RPE 8	4x6-8 @ RPE 8	2x8 @ RPE 7	2m
Lat Pulldown	3x10	3x10 heavier	4x8-10	2x10	75-90s
Walking Lunge	3x10/leg	3x10 heavier	3x8/leg hard	2x8/leg	90s
DB Shoulder Press	3x10	3x9 heavier	3x8 heavier	2x10 easy	90s
Cable Row	3x12	3x12 heavier	4x10	2x12	75s
Lateral Raise	2x15	3x15	3x12-15 hard	2x15	60s
Ab Wheel	3x8	3x10	3x12	2x8	60s

PRIMER

Med-ball slam - 3x5 explosive reps before lifting. Full intent; full control.

DAY C - SPEED / TECHNIQUE

Submaximal load, maximal quality. Every rep should look repeatable.

Exercise	Week 1	Week 2	Week 3	Week 4	Rest
Box Jump	4x3	4x3	5x3	3x3	60-90s
Speed Squat	6x2 @ 60%	6x2 @ 62.5%	6x2 @ 65-70%	5x2 @ 60-65%	60-90s
Speed Bench	6x3 @ 60%	6x3 @ 62.5%	6x3 @ 65-70%	5x3 @ 60-65%	60-90s
Paused Deadlift	5x2 @ 60%	5x2 @ 62.5%	5x2 @ 65-70%	4x2 @ 60-65%	90s
Pull-Up / Pulldown	4x6-8	4x7-8	4x6-8 heavier	3x6-8	90s
Single-Leg RDL	3x8/leg	3x8 heavier	3x6-8 heavier	2x8	90s
DB Bench	3x10	3x10 heavier	3x8-10 hard	2x10	75s
Face Pull	3x15	3x15	3x15-20	2x15	60s
Copenhagen Plank	3x20s/side	3x25s	3x30s	2x20s	45s

SPEED RULE

If a speed rep noticeably slows or position changes, stop the set or reduce the load. Speed work only works when it stays fast.

BLOCK COMPLETION

How to progress after Week 4.

IF THE BLOCK WENT WELL

- Increase the next block training max by roughly 5 lb for bench and 10 lb for squat/deadlift, or about 1-2%.
- Keep the same exercise structure if progress is still clear. Change variations only when there is a specific reason.
- You may test a rep PR or conservative 1RM after 2-4 easier days, but testing is optional.

IF YOU MISSED PRESCRIBED WORK

- Do not automatically add weight next block. Repeat the training max or reduce it 2.5-5%.
- Identify whether the limiter was technique, recovery, exercise selection, or an unrealistic training max.
- Progress is measured by better reps and sustainable loading, not by forcing weekly increases.

THE STANDARD

Compounds stay technically disciplined. Accessories can approach failure when appropriate. The goal is accumulated high-quality work, not random exhaustion.

EXERCISE NOTES

Execution standards for the movements used in this program.

BACK SQUAT

Brace before descending, maintain full-foot pressure, and keep the bar balanced over the mid-foot. Use the depth you can control consistently.

DEADLIFT

Create tension before the bar leaves the floor. Push the floor away and keep the bar close throughout the pull.

ROMANIAN DEADLIFT

Push the hips back with soft knees while keeping the bar close and the spine stable. Stop at your controlled hamstring range.

PALLOF PRESS

Resist rotation as the cable or band moves away from the torso. Keep ribs stacked over pelvis.

SPEED SQUAT / BENCH

Use explosive intent on every rep. The load is intentionally submaximal.

BENCH PRESS

Set the upper back, maintain stable foot pressure, lower under control, and press without losing shoulder position.

FRONT SQUAT

Keep elbows high, brace hard and allow the knees to travel as needed while keeping the torso controlled.

BULGARIAN SPLIT SQUAT

Use a stance that lets the front leg do the work. Descend under control and drive through the full foot.

COPENHAGEN PLANK

Support the top leg on a bench and keep the body in a straight line. Shorten the lever if needed.

PAUSED DEADLIFT

Pause in the prescribed position without relaxing. Maintain tension and finish the rep smoothly.
