

TENSOR STRENGTH

TENSOR HIGH-INTENSITY

4-WEEK STRENGTH-ENDURANCE + CONDITIONING PROGRAM

THE STANDARD

OUTPUT. CAPACITY. CONTROL.

Progressive training. Clear standards. Measurable execution.

FORMAT

3-DAY ROTATION

EMPHASIS

WORK CAPACITY

STANDARD

QUALITY UNDER FATIGUE

PROGRAM BRIEF

A 4-week strength-endurance and conditioning block built around quality intervals.

WHO THIS IS FOR

Members who want improved work capacity, general conditioning and athletic movement without abandoning strength training.

SCHEDULE

- 3 sessions per week with at least one lower-intensity or rest day between hard sessions when practical.
- Weights generally stay around RPE 6-8 because density and short rest periods provide additional difficulty.
- Never turn an interval into uncontrolled max-effort lifting. Reduce load before technique deteriorates.

Week	Work / Rest	Rounds	Primary Goal
1	30s / 30s	3	Learn pacing
2	35s / 25s	3	Increase density
3	40s / 20s	4	Peak work capacity
4	45s / 15s	4	Sustain output under fatigue

LOADING

Choose loads that allow the entire work interval to remain technically clean. If you cannot maintain position for the prescribed time, decrease load immediately.

SESSION 1 - FULL BODY

Strength endurance across the major movement patterns.

POWER PRIMER

Med-ball slam - 3x5. Rest 45-60 sec and attack every rep with full intent.

Station	Movement	Week 1	Week 2	Week 3	Week 4
1	Goblet Squat	30/30	35/25	40/20	45/15
2	DB Bench Press	30/30	35/25	40/20	45/15
3	TRX or Cable Row	30/30	35/25	40/20	45/15
4	DB Romanian Deadlift	30/30	35/25	40/20	45/15
5	Push-Up	30/30	35/25	40/20	45/15
6	Rower	30/30	35/25	40/20	45/15

- Weeks 1-2: 3 rounds. Weeks 3-4: 4 rounds.
- Rest 90 seconds between complete rounds.
- Record rower distance and total push-ups. Try to maintain or slightly improve output across rounds.

SESSION 2 - LOWER BODY + ENGINE

Lower-body strength followed by repeatable conditioning.

Exercise	Week 1	Week 2	Week 3	Week 4
Box Jump	3x3	3x3	4x3	3x3
Front Squat	3x6 RPE 7	3x6 +2.5-5%	4x5 RPE 8	3x5 RPE 7
DB Romanian Deadlift	3x8 RPE 7	3x8 heavier	4x6-8 RPE 8	2x8 RPE 7

CONDITIONING CIRCUIT

Station	Movement	W1	W2	W3	W4
1	Walking Lunge	30/30	35/25	40/20	45/15
2	Kettlebell Swing	30/30	35/25	40/20	45/15
3	Step-Up	30/30	35/25	40/20	45/15
4	Bike	30/30	35/25	40/20	45/15
5	Sit-Up	30/30	35/25	40/20	45/15

FINISHER

Alternate 10 bodyweight squats + 5 burpees for quality rounds: Week 1 = 4 min, Week 2 = 5 min, Week 3 = 6 min, Week 4 = 7 min.

SESSION 3 - UPPER BODY + ATHLETIC

Upper-body conditioning with speed, coordination and loaded carries.

ATHLETIC PREPARATION

Movement	Prescription
Med-Ball Chest Pass	3x5
Lateral Line Hop	3x15 sec
Single-Leg Balance Reach	2x5/side

Station	Movement	W1	W2	W3	W4
1	DB Incline Press	30/30	35/25	40/20	45/15
2	Lat Pulldown	30/30	35/25	40/20	45/15
3	DB Shoulder Press	30/30	35/25	40/20	45/15
4	Cable Row	30/30	35/25	40/20	45/15
5	Farmer Carry	30/30	35/25	40/20	45/15
6	Battle Rope	30/30	35/25	40/20	45/15

FINAL AMRAP

8 push-ups + 10 sit-ups + 12 air squats. Week 1: 5 min. Week 2: 6 min. Week 3: 7 min. Week 4: 8 min. Record completed rounds plus extra reps.

PACING & SCALING

The goal is sustained output, not winning the first minute.

- Round 1 should feel controlled. Aim to keep later rounds within roughly 10-15% of the first round output.
- Scale loads before shortening range of motion.
- For jumps, med-ball work and line hops, quality comes before fatigue. Stop explosive work if landings become noisy or unstable.
- For farmer carries, choose a load that challenges grip and trunk position without slowing to a stagger.
- If you are new to intervals, repeat Week 1 for an extra week before progressing density.

HIIT STANDARD

High intensity does not mean reckless intensity. The best conditioning sessions create hard breathing while preserving movement quality and enough recovery to train again.

WEEK 4 & NEXT BLOCK

How to finish the program and progress intelligently.

- Keep loads similar to Week 3 unless the longer work interval requires a reduction.
- Your primary Week-4 progression is work density, not heavier dumbbells.
- Compare total rounds, reps, machine distance and how well you maintained output.
- After Week 4, either repeat with slightly heavier loads or return to Week-1 intervals with more challenging exercise variations.

TRACKING

Log both resistance and conditioning output. A HIIT program is progressing when you can perform more quality work in the same or less time - not merely when you feel more exhausted.

EXERCISE NOTES

Execution standards for the movements used in this program.

GOBLET SQUAT

Keep the weight close to the chest, brace and squat through a comfortable full-foot position.

BOX JUMP

Jump to a height you can land quietly with control. Step down between reps.

LATERAL LINE HOP

Use quick low hops side-to-side with quiet landings. The goal is rhythm and ankle stiffness.

BATTLE ROPE

Stay braced with soft knees and create repeatable waves without excessive torso movement.

WORK / REST

30/30 means 30 seconds working followed by 30 seconds before the next station or effort.

KETTLEBELL SWING

Use a hip hinge and explosive hip extension. The arms guide the bell; they do not lift it like a front raise.

MED-BALL SLAM

Reach tall, brace and drive the ball down aggressively. Reset posture before each rep.

FARMER CARRY

Maintain tall posture, level shoulders and short efficient steps while gripping the load hard.

AMRAP

Complete as many clean rounds or reps as possible within the time limit. Pace so technique stays consistent.

RPE 7-8

A hard but sustainable resistance-training effort with roughly 2-3 good reps still available.
